QuarkXPress - Printing A Document

Mac Operating System

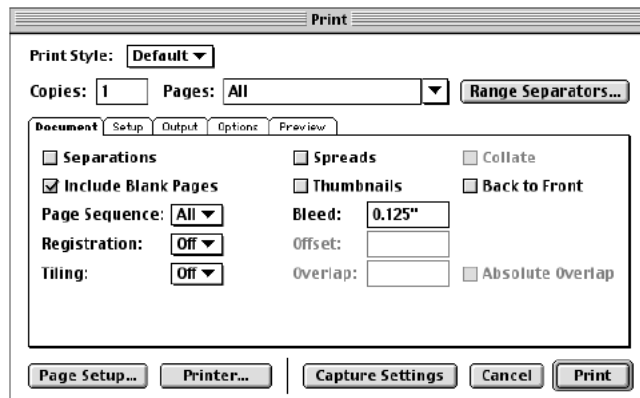

This document is intended as a **reference** guide for settings in QuarkXpress **to print out a document**. These settings may vary slightly from those required in generating PostScript from Quark. Consult the Configuring a Workstation for PS/PDF Generation document for other important information regarding Adobe Distiller setup.

Exporting to PDF from Quark is not recommended. Any PDF's sent to Victor Graphics must be generated with Adobe Distiller. If you have any questions on this please contact your customer service representative for further information. Screenshots are taken from Quark 6.x. These parameters can be applied to previous versions of Quark.

Supported Adobe Distiller/PDF Versions

QuarkXPress: v4.x-7.x.

From Quark select File and Page Setup. This will open the Print form that contains the tabs with the settings that will need to be set.

Document Tab

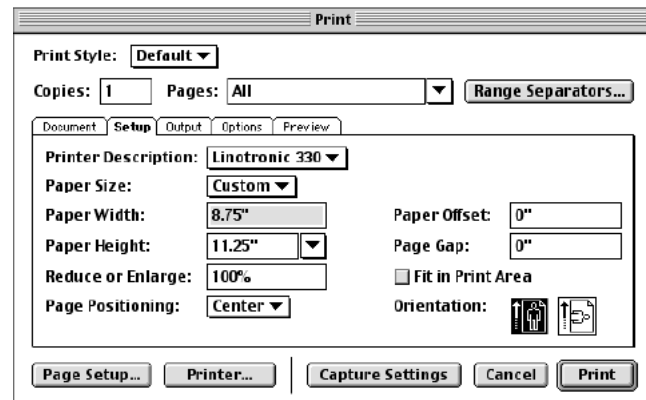

- Check the Include Blank Pages
- Registration is Off
- Tiling is Off
- Bleed is 0.125"

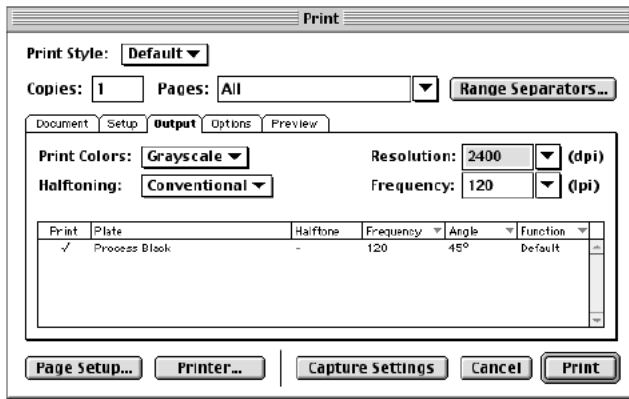

If a job requires Registration Marks, make sure that Offset is 9pt. (Marks are not necessary if file is setup according to these specs.)

Setup Tab

- The Printer Description can be any printer you select
- Set the Paper Size to custom
- Set the Paper Width to 8.5"
- Set the Paper Height to 11"
- Select Center for the Page Positioning
- Paper Offset is 0"
- Paper Gap is 0"

Note: If the document has a bleed, the dimensions would be 8.75" x 11.25" and the bleed would be set to .125".

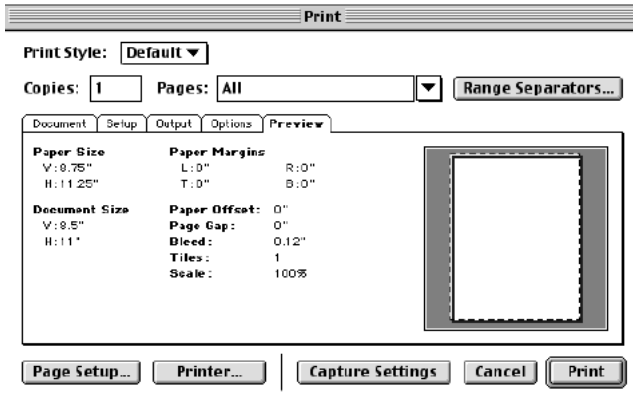

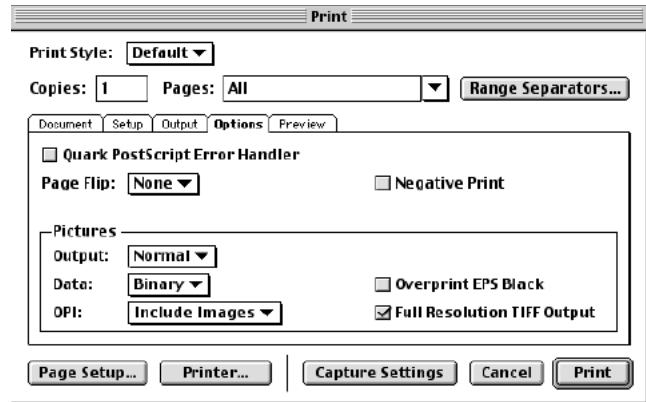

Output Tab

- If a job is two color leave "Print Colors" as CMYK
- Halftoning should be set to Conventional
- Resolution should be set to 2400 dpi
- Frequency should be set to 150 lpi

Options Tab

- Do not check the Quark PostScript Error Handler
- Page Flip should be set to none
- Do not select Negative Print
- The Output setting should be Normal
- The Data setting should be Binary
- Do not select Overprint EPS Black
- Select Full Resolution TIFF Output

Preview Tab

- This tab will display a summary of all the options that should be set and also display a viewable page for positioning.
- Click the Capture Settings button. QuarkXPress is now configured for PostScripting text files.
